Period fo	The MAILING DATE of this communication appears on the cover sheet with the correspondence address Period for Reply						
A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION. - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication. - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication. - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).							
Status							
1)	Responsive to communication(s) filed on						
	This action is FINAL . 2b) This action is non-final.						
• —	Since this application is in condition for allowance except for formal matters, prosecution as to the merits is						
	closed in accordance with the practice under Ex parte Quayle, 1935 C.D. 11, 453 O.G. 213.

Application/Control Number: 10/533,461

Art Unit: 1623

Claim 15 is rejected under 35 U.S.C. 112, first paragraph, because the specification, while being enabling for the treatment of bacterial infection, does not reasonably provide enablement for the treatment of microbial infection. The specification does not enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to use the invention commensurate in scope with these claims.

A conclusion of lack of enablement means that based on the evidence regarding each of the factors below, the specification, at the time the application was filed, would not have taught one skilled in the art how to use the full scope of the claimed invention without undue experimentation.

(A) The breadth of the claims.

Claim 15 encompasses the treatment of all microbial infections, including viral infection.

(B) The state of the prior art.

Erythromycin derivatives are well known antibacterial agents.

(C) The amount of direction provided by the inventor.

The inventor has failed to provide any direction as to which other microbial infections, besides bacterial infections, can be treated by the claimed method.

(D) The existence of working examples.

The working examples are limited to the effect of the claimed compounds against bacterial infections.

(E) The level of predictability in the art.

Application/Control Number: 10/533,461

Art Unit: 1623

Page 3

A person having ordinary skill in the art at the time the claimed invention was made would not have been able to predict on the basis of antibacterial activity of the compounds, whether said compounds would also be effective for the treatment of other types of microbial infections, such as viral infections.

Claim 10 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

It is not clear what is encompassed by the terminology "groups convertible to"9 all occurrence). Convertible under which conditions? Further, it is not clear from claim 10 how the resultant compound of formula (I) is converted into a pharmaceutically acceptable derivatives.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.
- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Application/Control Number: 10/533,461

Art Unit: 1623

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1-7, 9, 14 and 15 are rejected under 35 U.S.C. 102(a) as being anticipated by Ma et al (US2002/0019355).

Ma et al disclose pharmaceutically acceptable derivatives of the claimed compounds and their use as antibacterial agents.

Claims 1-7, 9, 10 and 14-16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Alihodzic et al (US 2005/0080025 A1) in view of Ma et al (U.S. 2002/0019355).

Alihodzic et al disclose closely analogous erythromycin derivatives (pages 1-2) having antibacterial activity and a process for preparing said compounds. The only difference between the claimed compounds and the reference's compounds is at the 9-position i.e. the reference's compounds do not containe an oxime group at the 9-position. However, since erythromycin derivatives having an oxime group art the 9-position were well known in the art at the time the claimed invention was made as

Art Unit: 1623

disclosed by Ma et al, a person having ordinary skill in the art at the time the claimed invention was made would have been motivated to modify the compounds disclosed by Alihodzic et al at the 9-position in accordance with the teaching by Ma et al because such a person would have expected the resulting compounds to possess antibacterial activity.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Elli Peselev whose telephone number is (571) 272-0659. The examiner can normally be reached on 8.00-4.30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Shaojia Jiang can be reached on (571) 272-0627. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
